

Philip Droubi

Full-Stack Developer (Laravel / React.js)

Damascus, Syria | +963 959 880 596 | philipdroubi@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

Professional Summary:

Software Engineer and Full-Stack Developer with strong backend expertise in Laravel and production-grade frontend experience using React.js. Skilled in building scalable APIs, designing clean architectures, and delivering end-to-end features across both backend systems and admin dashboards. Experienced in real-time features, system analysis, multi-project delivery, and stabilizing legacy projects. Leading cross-functional teams, and accelerating development through reusable structures and clear engineering practices.

Education:

Bachelor's Degree in Software Engineering

Damascus University - Faculty of Information Technology Engineering | 2019 – 2024.

Languages:

Arabic: Native language.

English: Good at speaking, reading, and writing.

Skills:

Backend:

- 3+ years of experience in **Laravel PHP framework**, building clean, scalable **REST APIs**, and documenting / testing them using **Postman**.
- Integration with third-party services like **Firebase FCM**, **Redis**, and **Stripe**: [Stripe project example](#).
- **Laravel Filament** to create dashboards: [Filament project](#), [video](#).
- **Laravel Reverb** for real-time features (Taxi App).
- Strong in database design, query optimization, and multi-currency financial logic.

Architecture & System Design

- Designed a reusable backend architecture template reducing project startup time by **30–40%**.
- Strong in system analysis (ERD, use-case, activity diagrams).
- Team leading, task planning, code reviews, and improving development workflows.

Frontend:

- Building responsive web applications using **HTML5**, **CSS3**, **Tailwind**, **JavaScript (ES6)**, and **TypeScript**. Find more of my HTML, CSS, and JavaScript work on [Frontend Mentor](#).
- **React.js** (React Query, React Router, Axios, React Forms, Zustand, MUI, Google Maps and more).
- Familiar with module-based architecture, reusable UI patterns, and admin dashboard development.

DevOps & Tools:

- Linux basics, cPanel, WHM, aaPanel and others, ability to work with supervisors, cron jobs, etc.
- Version control (Git, GitHub, and GitLab).
- Deployment workflow, Knowledge of SDLC principles, Agile methodologies, and Design Patterns.
- AI Tools like Claude, Cursor, Codex and more.

Volunteering:

Volunteered as a Software Engineer with the Blind Care Association in Damascus, [Volunteering Certificate](#). Involved in system analysis and design, along with backend development using the PHP Laravel framework.

My Experience:

Alburaq Group for Import & Export (Aug 2026 - Present)

AI Software Engineer & Backend Developer

Working on **Alburaq Brain**, the company's internal **ERP system** (sourcing, quotations, purchasing, shipping, finance, HR), and on the **company website** and its customer portal.

- Built an AI help assistant that answers employees by text or voice, step by step, and shows them where to click.
- Built the full order flow: sourcing request → quotations → purchase order → invoice → shipment.
- Built Excel import for factory price sheets, and PDF / Excel documents with Arabic and Chinese text.
- Worked on finance, roles and permissions, HR, and the customer portal (Django, 8 languages).
- Also worked on the Titan Project and other e-commerce projects.

Future Code (Jan 2025 - Present):

- **Team Leader & Software Engineer (Sep 2025 – Jun 2026):** Promoted to lead a cross-functional team of 6~7 members (Flutter, Web, QA) while staying hands-on with backend development in Laravel. Took charge of planning tasks, reviewing code, overseeing delivery, and building a collaborative team environment.

- **Software Engineer | Backend Developer (Jan 2025 – Jun 2026):** Built scalable Laravel APIs for mobile and web applications, collaborating closely with frontend and QA, delivered features across e-commerce, business management, and real-time applications. Migrated legacy systems from single-currency to multi-currency, including financial logic redesign and database restructuring, working on **~15 projects**, ensuring consistency, maintainability, and scalability

Designed and implemented a reusable backend architecture template for company that included: auth, roles, system/users management, notifications, API structure, error handling, and many more reducing project startup time by **30~40%**.

- Key Projects:

MovaCar Taxi System (Laravel + Reverb): Real-time Syrian taxi platform targeting yellow taxis.

- Implemented real-time driver tracking using Laravel Reverb with live location map.
- Implemented trip-sharing with a custom web page.
- Real-time updates for trip status, pricing, and driver movement.
- Supported multiple internal systems (POS, customer service, admin tools).
- Contributed to a complex pricing engine (coupons, shifts, seasons, compensation).

E-Commerce Platforms:

- Developed modules for product management, orders, warehouse, employees, and more.
- Ensured clean, stable API integration with mobile and web clients.

Business Management Systems:

- Built and maintained modules for inventory, HR, finance, reporting, and multi-currency operations.

Freelancer (2023 - Present): Working on multiple backend, frontend projects using Laravel framework and React.js (CargoX , Wayak Taxi, Medi-stock Manager, RAF Store ...).

Graduation Project: Kafo Freelancing Platform (2024): A Syrian freelancing platform that aims to improve collaboration between freelancers and stakeholders on freelancing projects.

I was responsible for system analysis and design, as well as backend development using the PHP Laravel. Additionally, I participated in the design and implementation of a user-friendly website using React.js.

Kafo was developed in collaboration with [Peak Link IT Company](#), providing valuable real-world IT experience.

Blind Care Association (2023): A project that aims to automate the management process of the Blind Care Association in Damascus, including user registration, managing, and distributing aid and aid requests.

Project was delivered in November 2023. More Details: [System Requirements \(AR\)](#), [Recommendation letter](#).

Vigor App (2022): A workout application that contains many advantages of Laravel such as: queues, jobs, events, WebSocket, FCM, scheduling, Laravel Socialite and Passport. Find More about this app: [on LinkedIn](#).
